6000 Counts with NCV ...", ...
...

- Use this file to enrich item representations, build hybrid models, or support content-aware recommendations
- Usage of this file is **optional**, but leveraging item-level semantic information may help you achieve better recommendation performance

◆ sample_submission.csv

```
ID,user_id,item_id
12,12,"6312,12419,6891,664,4243,8377,
7962,6635,12842,4970"
14,14,"7809,5867,9559,3579,8269,2282,
4618,2290,12384,1554"
...
```

- Each `user_id` must have **exactly 10 comma-separated item_ids**
- `ID` is the identifier of each test instance, which should be the same as `user_id`

!!! You are only required to generate predictions for the `user_id` s listed in `sample_submission.csv`. Do not generate predictions for other users in the submission file. !!!
